

Art and innovation Made in Italy

Each window is made of wood frame and hand-made ornaments, the finishes are made with traditional techniques of high level, in this way the window becomes a single piece, *made in Italy*.

The artistic window ANIMAEFERRO is available in models: double sash window, door and sliding doors.

Frame and glass personalization

Model

You can personalize your window choosing in our wide range of artistic works, from the models with stylized decoration till those with more linear forms.

It is our mission to give you the possibility to find the artistic window that is mostly in accord with the hosting entourage or with your personality

Colour and finishing

The colour choice, from gold foil till your favorite colour, is a further opportunity to make your window unique.

Your privacy in one touch

Your window can be provided with liquid-crystal glass that, thanks to an advanced constructive technology, can darken in one moment with a simple touch of remote control, resulting opaque for the eyes, but transparent for light.

Physical mechanical tests of double sash hopper window mm 1500x1650

- Permeability for air: Class 4
- Watertightness: E1500
- Wind resistance: Class C5

THERMAL INSULATION

Single window mm 1230 x 1480

UF	UG	UW
2.20 W/m ² K	0.6 W/m ² K PSI = 0.045	1.1 W/m ² K

Double window mm 1230 x 1480

UF	UG	UW
2.20 W/m ² K	0.6 W/m ² K PSI = 0.045	1.4 W/m ² K

ANIMAEFERRO™

A *frame* to the World

Apart of classic sashes, we offer exclusively the following: a frame to the world.

Wooden and aluminium sashes are studied to respect the highest quality level for thermic insulation and environmental conformity. We present particular profiles and forms; decorations and colours make our sashes unique and real masterpieces, made in Italy.

ANIMAEFERRO | artistic window

Series of aluminium-wood with thermic cutting. Excellent workability and high environmental thermic and acoustic performances join the warmth of internal wood that can be proposed in different colours that will satisfy all various architectural requests.

Entire range of profiles includes all the solutions: window, door-window, hopper window, horizontally revolving window, horizontally glider window, external doors also with external opening, all this is proposed in different technical and esthetic solutions. High physical mechanical performances obtained thanks to the ample hollow metal frame of the opened junction are surely to mark out.

The frame can install the glass from 25 till 50 mm with single glass structure (double glass or double laminated glass) or with double glass structure (triple glass). The width of the chamber varies due to the characteristics of the sash and in order to increase further thermic insulation it is possible to insert the gas Argon inside the glass structure.

AVAILABLE MODELS

NATHURA 70

- Wood-aluminum casement series
- Aluminum external and internal thermal fine wood quality
- Section frame base 70 mm / Section leaf base 90 mm
- High thermal insulation already meets the new standards required by law
- Hardware multi perimeter burglary
- Thermal insulation of the frame 2 doors U_w normalized to 1.6 W/m²K with the value of the glass U_g 1.0 W/m²K

NATHURA 82

- Section frame base 82 mm / Section leaf base 102 mm
- Thermal insulation of the frame 2 doors U_w normalized to 1.2 W/m²K with the value of the glass U_g 1.0 W/m²K

NATHURA 92

- Section frame base 92 mm / Section leaf base 120 mm
- Thermal insulation of the frame 2 doors U_w normalized to 1.0 W/m²K with the value of the glass U_g 1.0 W/m²K
